From roads, railways and airports to public transit, utilities, hospitals and safe drinking water, the infrastructure sector plays a critical role in the functioning of Canadian society and is vital to the broader economic health of the country.

As the need for new and replacement municipal, provincial and federal infrastructure intensifies, the public and private partnership (P3) model is being used more frequently. Public and private infrastructure projects, including P3s and alternative financing and procurement (AFP) structures, are key drivers in the continued growth of the nation's economy.

These projects are often complex, with lengthy lifecycles and the potential for myriad setbacks.

How we can help

At Osler, our Infrastructure Group comprises a team of practitioners with a broad range of specializations, including several professional engineers. We have guided domestic and international clients including private companies, funders, governments and other public organizations through every stage of the lifecycle of infrastructure projects of all sizes. You can rely on our highly skilled, multi-disciplinary team to help you navigate all aspects of the process, from the initial RFP to financing arrangements, assessments and permits, and project completion.

We know how important it is for your project to be completed on budget and on time. If your project runs into problems, our dispute resolution experts can help get you back on track. Our sophisticated group of infrastructure litigators work as a cohesive unit alongside our front-end construction and infrastructure teams on project finance, public-private partnerships (P3) developments and more, providing a unique level of insight into the dispute resolution process.
